

# Eves Delight

Everbearer Strawberry Variety

## Edward Vinson Ltd

Soft fruit Propagators and Breeders

# Eves Delight

Everbearer Strawberry

Eves Delight was selected by the Edward Vinson Breeding Programme in 2004.

### Fruit Quality

- Simple flower trusses giving large average fruit size
- Excellent fruit shape
- Highly flavoured with good aroma
- Firm skin giving excellent shelf life
- Sweet and juicy, brix levels in excess of 10%
- Late season, but good production from autumn initiated flowers. Suited to long season production
- Tolerant to Powdery Mildew

### Yields and production profile

To optimise total yield the autumn initiated flower should be utilised. Early planted crops (large crowned potted plants) achieve up to 400gm from the autumn initiated flowers and then go on to produce a final yield of between 900gms and 1.5kg per plant.

### Plant types

A variety of plant types including frigo plants are available and being used throughout the EU in different production systems depending on the individual growers needs.

Please discuss your specific requirement with one of the licensed propagators overleaf.

### Recommended Growing Practices

- Suitable for substrate or soil growing, consider long length of truss when planting into substrates.
- Eves Delight is susceptible to rain damage; needs to be protected with polythene tunnels.
- Do not remove autumn initiated flower.

### Current Growing and Fruit Marketing Exclusivities

BerryWorld Ltd	UK
Keelings Softfruit	Republic of Ireland
